HATFIELD, PA, 2/12/07- Kingcaid Acoustics, LLC, the Kirksaeter Home Theater importers for North America, announces today a new addition to the award winning Kirksaeter Silverline series of outstanding Home Theater speaker systems.

The Silverline 60 Dipole is an exact compliment to the Kirksaeter Silverline 60 speakers. It uses the same 25mm soft metal dome tweeter and 10cm fibre cone woofer as the Silverline 60 mini monitor which resided as a Stereophile recommended component for years. In fact, the Dipole 60 can be viewed as two Silverline 60 loudspeakers in one cabinet. As with all Kirksaeter Silverline and Prisma series speakers the Dipole is partly handmade and completely designed and manufactured in Europe. The Dipole 60 features red mahogany décor strips with black grills covering the three front sides. The Dipole 60 is the second dipole available from Kirksaeter joining the Prisma 55 dipole (which is available in black or all white) .The exact web posting will be as follows:

**DIPOLE/BIPOLE
SILVERLINE 60**

(shown without black grills)

This speaker is unique, with many functions normally not found in a loudspeaker. The speaker cabinet consists of two speaker chambers, each containing one independent speaker system connected to its own cable terminal. Depending how the cables are connected, the speaker fills a number of different functions. It can hang on the wall and because of the disperse angle of 160 degrees it also does a fine job when attached to the ceiling.

(rear view)

... Used For Stereo Speaker

The left and the right channel of the amplifier are connected to the two cable terminals of the speaker. Because the speaker cabinet has angled sides, you will hear left and right channel at the same time and enjoy full stereo. This sound makes it unique in many installations.

... Used For Home Theatre

For home theaters, connect left and right rear amplifier cable to the speaker, hang it on the wall behind your seating area, or in the ceiling, and you will enjoy full sounds with one cabinet instead of using two rear speakers.

You can use it as a side speaker wired as a bipole or dipole for use in a 5.1 or 7.1 surround system. In a simple Kirksaeter Starter Home Theater, the Silverline dipole 60 is often used as the rear left and right rear speakers since each side can be wired independently. Coupled with front speakers such as the Silverline 120, you will have a quality high end Home Theater sound with only 3 speaker boxes (2 front + 1 rear).
